

Top 5 Safety Tips for Spring Field Preparation

April 2022

1. Look up and look out!

You should always be 10 feet away from power lines on all sides.

2. If a power line on your property is sagging, call us.

Never try to move or adjust a power line on your own.

3. If a guy wire or other power equipment breaks, call us.

It could become charged with electricity, do not try to fix it yourself.

4. Think about high-traffic areas around the farm.

Consider moving or burying power lines around buildings or busy pathways where many farm activities take place.

5. Before digging, call 8-1-1.

Everyone should know where underground utilities are located, and how to avoid them.
