Understanding Your Energy Bill

People's Energy Cooperative is utilizing a new bill format that is easier to read and draws your attention to key billing information with full color graphics. Most members with multiple meters or accounts will now receive all information on one billing statement.

The 'Billing Summary' replaces the 'Other Bill Information' section and provides a snap-shot of your payment activity.

Messages specific to your account will stand out to make you aware of information such as expired credit cards on file, a past due reminder or if your service is facing disconnection.

This section summarizes the meter detail for each service address.

The 'PEC Message' area displays important information about upcoming Cooperative events, member programs and reminders.

The 'kWh Use History' has been expanded to include average daily temperature, daily kWh used and daily cost information.

PEC Message The Cooperative is seeking individuals in Districts 2 and 4 interested in serving on the 2015 nominating committee. Members of the nominating committee are responsible for presenting the names of individuals who wish to run for the Board of Directors. We encourage all members to take an active role in the election process. For more information, please contact Gwen Stevens at

For your convenience we've added our pay by phone number.

There are two significant changes to the 'Detail of Charges' section. The first is that the 'Facility Charge' is now called 'Basic Service Charge' to better reflect the purpose of this charge. This charge covers the costs associated with supplying electrical service to an individual meter.

The other key change is that members with multiple meters will now see all of their meters listed on one statement. Most members with multiple accounts will now have all of their accounts listed on one statement and key information will be provided for each account.

Please note the back of the first page of the billing statement now contains important information such as contact information, steps to follow in a power outage, payment options and more.

Glossary of Bill Terms

Basic Service Charge accounts for the majority of the Cooperative's investment in poles, wires, transformers and equipment to provide members with electric service. It supports fleet, facility and customer service functions, such as outage response, line maintenance, right-of-way clearing, member services support and administrative responsibilities.

Demand Charge is the highest metered "demand", measured in kilowatts (kW), for electricity in a 15-minute period per billing cycle. The charge is calculated based on cost per kW used.

Power Cost Adjustments (PCA) are dependent upon the true cost of power from Dairyland Power Cooperative, our power supplier. This can be in the form of a charge or a credit and is a direct pass-thru from Dairyland.

Energy Charge is based on the kilowatt hours (kWh) consumed during the 'statement read dates' and is multiplied by the current energy rate to calculate the charge. This also includes a portion of the infrastructure costs, maintenance and administrative expenses, and costs associated with environmental and renewable regulations.

Kilowatt-hour (kWh) is the measurement of electricity used. One kWh is equal to 1,000 watts used continuously for one hour. For instance, a 100-watt light bulb burning for 10 hours uses one kWh. The higher the watt rating on electrical devices, the more electricity it uses.

Usage Multipliers more than 1.0 are used when the meter only registers a percentage of the actual energy used; therefore, a multiplier is required to calculate actual usage.
